Atomic Properties in Hot Plasmas: From Levels to Superconfigurations Jacques Bauche, Claire Bauche-Arnoult, Olivier Peyrusse

This book is devoted to the calculation of hot-plasma properties which generally requires a huge number of atomic data. It is the first book that combines information on the details of the basic atomic physics and its application to atomic spectroscopy with the use of the relevant statistical approaches. Information like energy levels, radiative rates, collisional and radiative cross-sections, etc., must be included in equilibrium or non-equilibrium models in order to describe both the atomic-population kinetics and the radiative properties. From the very large number of levels and transitions involved in complex ions, some statistical (global) properties emerge.

The book presents a coherent set of concepts and compact formulas suitable for tractable and accurate calculations. The topics addressed are: radiative emission and absorption, and a dozen of other collisional and radiative processes; transition arrays between level ensembles (configurations, superconfigurations); effective temperatures of configurations, superconfigurations, and ions; charge-state distributions; radiative power losses and opacity. There are many numerical examples and comparisons with experiment presented throughout the book. The plasma properties described in this book are especially relevant to large nuclear fusion facilities such as the NIF (California) and the ITER (France), and to astrophysics.

Methods relevant to the central-field configurational model are described in detail in the appendices: tensor-operator techniques, second-quantization formalism, statistical distribution moments, and the algebra of partition functions. Some extra tools are propensity laws, correlations, and fractals. These methods are applied to the analytical derivation of many properties, specially the global ones, through which the complexity is much reduced. The book is intended for graduate-level students, and for physicists working in the field.

From reader reviews:

Lavinia Arthur:

Nowadays reading books be than want or need but also become a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book which improve your knowledge and information. The details you get based on what kind of e-book you read, if you want get more knowledge just go with training books but if you want experience happy read one along with theme for entertaining including comic or novel. Typically the Atomic Properties in Hot Plasmas: From Levels to Superconfigurations is kind of book which is giving the reader unpredictable experience.

Harold Bunch:

Reading a e-book can be one of a lot of action that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new information. When you read a publication you will get new information since book is one of several ways to share the information as well as their idea. Second, reading a book will make an individual more imaginative. When you studying a book especially fictional works book the author will bring someone to imagine the story how the personas do it anything. Third, you can share your knowledge to others. When you read this Atomic Properties in Hot Plasmas: From Levels to Superconfigurations, it is possible to tells your family, friends along with soon about yours publication. Your knowledge can inspire the mediocre, make them reading a book.

Jeffrey Bumgardner:

As a scholar exactly feel bored for you to reading. If their teacher inquired them to go to the library as well as to make summary for some e-book, they are complained. Just small students that has reading's heart or real their leisure activity. They just do what the teacher want, like asked to the library. They go to generally there but nothing reading significantly. Any students feel that reading through is not important, boring in addition to can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore this Atomic Properties in Hot Plasmas: From Levels to Superconfigurations can make you sense more interested to read.

Samuel Freeman:

Reading a reserve make you to get more knowledge from that. You can take knowledge and information from a book. Book is composed or printed or highlighted from each source in which filled update of news. In this modern era like now, many ways to get information are available for you. From media social just like newspaper, magazines, science e-book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just searching for the Atomic Properties in Hot Plasmas: From Levels to Superconfigurations when you desired

it?
