Template Matching Techniques in Computer Vision: Theory and Practice Roberto Brunelli

The detection and recognition of objects in images is a key research topic in the computer vision community. Within this area, face recognition and interpretation has attracted increasing attention owing to the possibility of unveiling human perception mechanisms, and for the development of practical biometric systems. This book and the accompanying website, focus on template matching, a subset of object recognition techniques of wide applicability, which has proved to be particularly effective for face recognition applications. Using examples from face processing tasks throughout the book to illustrate more general object recognition approaches, Roberto Brunelli:

- examines the basics of digital image formation, highlighting points critical to the task of template matching;
- presents basic and advanced template matching techniques, targeting grey-level images, shapes and point sets;
- discusses recent pattern classification paradigms from a template matching perspective;
- illustrates the development of a real face recognition system;
- explores the use of advanced computer graphics techniques in the development of computer vision algorithms.

Template Matching Techniques in Computer Vision is primarily aimed at practitioners working on the development of systems for effective object recognition such as biometrics, robot navigation, multimedia retrieval and landmark detection. It is also of interest to graduate students undertaking studies in these areas.

From reader reviews:

Marilyn Daniels:

Do you considered one of people who can't read enjoyable if the sentence chained within the straightway, hold on guys this aren't like that. This Template Matching Techniques in Computer Vision: Theory and Practice book is readable through you who hate the straight word style. You will find the info here are arrange for enjoyable studying experience without leaving possibly decrease the knowledge that want to deliver to you. The writer regarding Template Matching Techniques in Computer Vision: Theory and Practice content conveys the idea easily to understand by a lot of people. The printed and e-book are not different in the information but it just different in the form of it. So , do you still thinking Template Matching Techniques in Computer Vision: Theory and Practice is not loveable to be your top checklist reading book?

Lee Erbe:

Often the book Template Matching Techniques in Computer Vision: Theory and Practice has a lot associated with on it. So when you check out this book you can get a lot of benefit. The book was written by the very famous author. The author makes some research before write this book. This book very easy to read you can obtain the point easily after perusing this book.

Allen Grimm:

As we know that book is significant thing to add our expertise for everything. By a e-book we can know everything we would like. A book is a set of written, printed, illustrated as well as blank sheet. Every year had been exactly added. This book Template Matching Techniques in Computer Vision: Theory and Practice was filled in relation to science. Spend your free time to add your knowledge about your research competence. Some people has various feel when they reading some sort of book. If you know how big benefit of a book, you can feel enjoy to read a e-book. In the modern era like currently, many ways to get book which you wanted.

Richard Russell:

What is your hobby? Have you heard in which question when you got students? We believe that that query was given by teacher for their students. Many kinds of hobby, Every individual has different hobby. And you know that little person similar to reading or as reading through become their hobby. You must know that reading is very important in addition to book as to be the thing. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You see good news or update with regards to something by book. A substantial number of sorts of books that can you choose to use be your object. One of them are these claims Template Matching Techniques in Computer Vision: Theory and Practice.
