Build Web Applications with Java: Learn every aspect to build web applications from scratch Mr. Mirza Yousuf Ahmed Baig

This book is primarily intended for beginners who wants to learn various aspects of software engineering and building web applications using Java programming language. There are many good books available in the market which independently teach Java, Web Servers, MVC based Frameworks, JSP, PL/SQL, AJAX, JavaScript, CSS, HTML5, UML, SDLC etc. This book covers all of these things plus other aspects together while building an actual web application from inception till completion. This books takes a sample web application and builds it from scratch. Each aspect is explained at micro level with real time examples along with the UML diagrams and code. The fundamental concepts of software engineering and programming web applications are covered with high importance. The objective of this book is to teach building modern day business web applications using java and other related technologies. This book teaches everything in details and in simpler way about building web applications with medium to high level of complexity. This book also covers various software engineering concepts that are required for building software solutions. The book takes you through each and every step of building a web application from scratch. The objective is to teach the reader every single aspect of software engineering required for building web applications from inception till deployment and support. In order to achieve the objective, a real life business requirement is taken and the sample project is built step by step from requirements gathering till deployment and support. The book includes building a light weight MVC based Java framework and building the sample web application using it. During the course architecture, SDLC, UML, security, ajax, various patterns, best practices and other related topics are explained. The best way to learn anything is to get the hands dirty. When a developer starts building any software solution, he/she gets lots of doubts and questions while actually doing it. When the reader architects, designs and does the coding hands on, the reader learns every aspect practically. When the reader builds the working application step by step, the confidence of the reader as a developer is boosted.

Melvin Dwyer:

Many people spending their time frame by playing outside with friends, fun activity along with family or just watching TV the entire day. You can have new activity to shell out your whole day by reading through a book. Ugh, do you consider reading a book can really hard because you have to take the book everywhere? It fine you can have the e-book, having everywhere you want in your Smartphone. Like Build Web Applications with Java: Learn every aspect to build web applications from scratch which is getting the e-book version. So , try out this book? Let's find.

Ann Amos:

As a university student exactly feel bored to reading. If their teacher asked them to go to the library or even make summary for some guide, they are complained. Just small students that has reading's internal or real their interest. They just do what the professor want, like asked to the library. They go to presently there but nothing reading critically. Any students feel that reading through is not important, boring and can't see colorful pictures on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Build Web Applications with Java: Learn every aspect to build web applications from

scratch can make you feel more interested to read.
